

Sea Turtle Species of the Atlantic Coast of the USA Booklet

As a group you need to make a booklet that has information about each of the sea turtles that inhabit the Atlantic coast of the USA.

Each of you are responsible for and must complete one page (One species).

(If your group has less than 5 members you must work together to complete the remaining pages.)

You must also make a front cover, table of contents, and bibliography.

The booklet must be typed.

The booklet must be neatly attached together in booklet form (all pages the same size.)

The Sea Turtle Species of the Atlantic Coast of the USA are:

Loggerhead

Green

Leatherback

Hawksbill

Kemp's Ridley

For each species, you must provide the following information:

A Title (Common name of the Sea Turtle)

Scientific Name

A Photograph of the sea turtle

Average size of the carapace and average mass

Characteristics of their carapace

Environment localities

Nesting information

Crawl prints

You must also provide additional information that you find interesting.
