

Medical Procedure Research Video

The health field has many branches and many diagnostic tools. When you go into a hospital because you are sick or injured, doctors may order a variety of tests and procedures to help you get better.

In this project, you are the head of a new hospital in Newton Falls. You are going to create a short video to teach your local community about a medical procedure you can perform at your hospital.

Choose one of the following procedures to advertise:

- CAT Scan
- MRI
- Kidney Dialysis
- Stress Test on Heart
- Cataract Removal
- Gall Bladder Surgery
- Transplants (choose a specific organ)
- Tonsils Removal
- Wisdom Tooth Extraction
- Colonoscopy
- Endoscopy
- Lasik Surgery

In your video you should include the following:

- Why would you need this procedure? What health problem does it solve or prevent?
- What would happen if you needed this procedure and you didn't have access to it?
- Who usually gets this procedure done, is there a specific group that it is more common in (children, the elderly, etc)
- Is this a procedure that will improve a person's life or is it something you would encourage a person to do as preventative medicine?
- Is it a diagnostic procedure (preventative) or it is used to fix a problem or cure a disease?
- Who performs it (doctor, nurse, technician, surgeon..)?
- What equipment is needed?
- What preparations are needed by the patient?
- What are the risks of the procedure?
- What can be done to make the procedure easier on a person?
- A logo for your Hospital

You may use whatever video software you want so long as the video is rendered before it is turned in.
