

# Lab Dissections

## Your dissection kit includes:

1. Dissecting Pan—with paper towel insert
2. Ruler
3. Mall Probe
4. Pipette Dropper
5. Dissecting Scissors
6. Scalpel
7. Forceps
8. Magnifying Glass
9. Dissecting Needle
10. Dissecting Pins (6)

## Rules:

1. Treat all specimens with respect.
2. Leave the paper towel in the dissecting pan while you dissect. (This assures easier clean-up.)
3. Use extreme caution. Dissecting tools are sharp.
4. Only make cuts/incisions or remove limbs etc. when directed to do so by written instructions or unless Mrs. Donley tells you to.
5. Replace the paper towel with a fresh one when cleaning up after a dissection. (Unless they change the paper towel dispenser again, hitting the paper towel dispenser lever 5 times will give the proper length of paper towel for the pan.)
6. Make sure that all dissecting tools are clean and place them back in their appropriate compartments of the tool case.
7. Put dissecting tool case in your dissecting pan in the open position.
8. Replace the dissecting pan in the cupboard (in number order).
9. Dispose of specimens as you are told by Mrs. Donley. **DO NOT TAKE ANY SPECIMEN PARTS OUTSIDE THE CLASSROOM!!!**
