

Fixes for 2007 Biome Activity

Select the cells of information you wish to graph.

Select the "Insert" ribbon tab.

In the chart section choose the "Column" button and under 2-D Column choose the first chart option (Clustered column).

A chart (graph) appears in your spreadsheet.

Literally click on a column of data in your secondary y value data set (temperature).

Right click on your chart and select "Change series chart type" from the popup menu.

Select "Line with Markers" the 4th line graph option.

Set up your secondary axis by right clicking on a data point box of line of the line graph and choosing "Format Data Series."

Select "Secondary Axis" radio button in the popup. Then click close.

Now add your axis titles and overall chart title by:

Choose the layout ribbon tab.

Select chart title and choose "above chart" Then type your chart title in the textbox that appears.

Add your X Axis title: Select Axis titles then "Primary horizontal axis title" then select "Title Below Axis" and add your title to the textbox.

Add your Y Axis title: Select Axis titles then "Primary vertical axis title" then select "rotated title" and add your title to the textbox.

Add your secondary vertical axis title: Select Axis titles then "Secondary vertical axis title" then select "rotated title" and add your title to the textbox.
